Professional Summary

Frontend-focused Software Engineer with 2.5 years of experience building and shipping web applications using React, Next.js, and TypeScript. Worked across B2C travel platforms, OTT subscription products, internal CMS systems, and AI-assisted operational tools used by customer-facing and internal teams. Experienced in integrating LLM workflows using OpenAI and Vercel AI SDK, with additional backend exposure through self-directed full-stack projects using Node.js and MongoDB.

Experience

Travelxp India Private Limited — Mumbai, India

Dec 2023 – May 2026

Software Development Engineer II (SDE II)

AI / LLM Integrations

- Built an AI-assisted Flight Quote CMS using Next.js, TypeScript, OpenAI GPT-4o mini, and Vercel AI SDK to automate quote generation workflows for internal operations teams.
- Streamed structured AI outputs into the UI using `useObject` with Zod-based validation layers, reducing quote turnaround time from ~4 hours to under 10 minutes for a 6-person ops team.
- Designed validation schemas connecting AI-generated responses with frontend forms and backend services, while providing manual override flows for operational teams before submission.
- Used Vercel AI SDK's `generateObject` and `useObject` in production with streaming UI patterns that progressively surfaced generated fields during model execution.

B2C Product

- Built and owned frontend workflows for multi-vertical booking funnels covering flights, hotels, activities, and holiday packages — including search, results, detail pages, cart, checkout, and payment experiences.
- Built subscription-aware UI and streaming video modules for Travelxp's OTT platform, integrating entitlement APIs to gate content based on real-time subscription state.
- Implemented Next.js SSR for hotel, flight, and holiday-package discovery pages to improve discoverability and search indexing for high-intent travel queries.
- Integrated Wotnot chatbot and RudderStack event tracking for product and growth funnel analysis while working against 10+ backend services and third-party SDKs with graceful fallback handling.

CMS & Internal Tools

- Built a visual page-builder CMS with drag-and-drop component blocks and schema-driven persistence powering home pages across 4 B2C verticals. Also built the corresponding Next.js SSR renderer for frontend page generation.
- Built the OTT video asset management UI supporting upload workflows, encoding-status tracking, quality-variant display, preview playback, and metadata management for long-running async processing flows.
- Built coupon management interfaces and admin dashboards used by finance, support, product, operations, and growth teams for managing bookings, accounts, transactions, and marketing assets.
- Built an operator-facing booking form supporting all travel verticals, subscriptions, and insurance products with conditional flows, payment-mode selection, and validation layers integrated into the same booking pipeline as online orders.
- **Foodxp** (separate B2C product, same employer) — Extended the Foodxp CMS with frontend modules, dashboards, and third-party integrations on shared Next.js and MongoDB infrastructure.

Side Projects

BH4i — AI Personal Assistant (Telegram Bot) Self-directed full-stack project *Built to develop backend depth alongside a frontend engineering role.*

- Built a multi-modal Telegram AI assistant supporting persistent chat, scheduled daily briefings, web-search grounding, and context-aware Q&A over uploaded PDF, DOCX, XLSX, CSV, and image files.
- Integrated Gmail and Outlook accounts using OAuth and IMAP flows with AI-driven email categorization and automation workflows.
- Implemented AES-256-GCM encryption for credential storage, MongoDB-backed sliding-window rate limiting, token

- quotas, onboarding flows, and admin tooling for operational management.
- Stack: Next.js, MongoDB (Mongoose, GridFS), Google Gemini, Microsoft Graph + MSAL, googleapis, imapflow, nodemailer, node-cron, Vercel.
 - **GitHub:** github.com/itush4rr/bh4i_bot · **Live:** bh4i-bot.vercel.app

Skills

- **Languages:** TypeScript, JavaScript (ES6+), HTML, CSS
- **Frontend:** React, Next.js (App Router, SSR), Tailwind CSS, shadcn/ui
- **AI / LLM:** OpenAI, Google Gemini, Vercel AI SDK, Prompt Engineering, Streaming UI Patterns
- **Backend:** Node.js, MongoDB (Mongoose), REST APIs, OAuth 2.0, IMAP
- **Tooling & Deploy:** Git, Vercel, RudderStack Analytics, Environment Configuration

Education

Subharti University, Meerut — Master of Business Administration	Apr 2020 – Jul 2022
Self-taught Full-Stack Web Development — Udemy + production project work	2022 – ongoing
